ELECTRICIAN

## 👤 Profile

My father is an electrical engineer who worked a lot with solar panels. I was always curious about his trade and after two internships during secondary school as Mechatronics engineer, I decided to take electronics as the subject for my high school. After high school, I wanted to do something less theoretical and started an apprenticeship as electrician in Bruchköbel. I graduated with high honors and as one of the best which led me right into studying electrical engineering to become a teacher for that matter. As secondary subject I chose the English language to stay world open and be able to travel. During my studies I wanted to visit friends, I made through online games, in Stockholm and decided to stay. Currently I'm living at a friend's place, looking for work so I can get my own apartment and move my belongings from Germany.

## 🏢 Employment History

### Elektroniker für Energie- und Gebäudetechnik at E.T.S. Elektro Technik Schmidt, Bruchköbel

September 2015 — October 2016

Started my apprenticeship in Bruchköbel and moved to Velbert at the beginning of October. Both my bosses had no issues with me moving because my grades were good enough.
